

Perforated Round Hole Pattern Sheet

Perforated round hole pattern is versatile, economical, and comes in a broad range of hole patterns, sizes, gauges, and materials

Product Features

- Used for ventilation, decoration, protection, etc.
- Good strength-to-weight ratio
- Wide range of open area percentages
- Accurate hole sizes
- Available in corrosion resistant materials
- Available in lightweight materials
- Suitable for decorative applications

How is Round Perforated Made?

Round perforated is a sheet or coil of material made from metal that contains holes punched by a die. The shape of the hole is determined by the shape of the die. For perforated with a round hole pattern, the die is circular. The die's diameter can vary from approximately twice the thickness of the material being punched to over two inches.
