

Wire Mesh - Square Weave

Woven is the most popular wire mesh. It is available in a wide range of meshes, weaves and opening sizes.

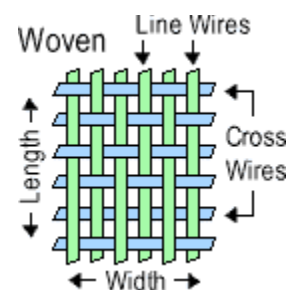

Product Features

- Flexible, easy to shape
- Variety of opening sizes
- Rolls, sheets or panels, and cut-to-size
- Available in small opening sizes
- Selection of weave and crimp styles
- Strength, durability

What is Woven Wire Mesh?

Woven wire mesh is cloth made from wire strands. The wires that make up wire mesh run parallel to the width of the roll (cross wires) and parallel to the length (line wires). The cross and line wires are interwoven. That is, the wires cross over and under each other. Wire Mesh can be woven in a number of different styles depending on the material type, wire diameter, and opening size (see weave styles). Woven wire mesh is available in rolls, sheets or panels, and cut-to-size
